

Wahrscheinlichkeitstafel: Normalverteilung N(0, 1) (Version 2a)

Standardnormalverteilung mit Erwartungswert 0 und Varianz 1: $\varphi(x) = e^{-x^2/2}/\sqrt{2\pi}$ als Dichtefunktion, $\Phi(x) = \int_{-\infty}^x \varphi(t)dt$ als Verteilungsfunktion -> Zufallsvariable X mit $p(X \leq x) = \Phi(x)$, $-3,60 \leq x \leq 3,60$.
